Environmental Systems International LLC has formed in 1999 to meet the growing demand for environmental products in the Arab-Gulf market place. Initially ESI was involved in providing solutions to both hazardous and hydrocarbon spills in conjunction with SPC Inc. (Sorbent Products Corporation) from the U.S. Later on we added ENPAC secondary spill containment equipment, which work hand in glove with the SPC absorbent range. In 2001 ESI entered into a UAE marketing + sales agreement with UNITOR to stock and market their wide range of environmental and biodegradable cleaning products, including their water and fuel treatment chemicals. At the urging of some of our clients ESI moved into water treatment and started in 2001 to market the Rowafil washbay water re-cycling system, we currently have 56 re-cycling units operating successfully in the United Arab Emirates. Our client list includes Schlumberger, Gultainer, Toyota, McDermott, BMW, Aggreko Generators, Dutco, Dubai Aluminium, Adnoc, Dnata, Emarat, G.E. Energy, Ritchie Bros and many others. Recently we have expanded our portfolio of water treatment expertise to include Black Water Sewage Treatment with ATB from Germany, Grey Water, Reverse Osmosis and Water Aeration Technology a 1-stop shop for most water issues. From the very start of ESI we have been involved in Oil Pollution equipment and we represent Slickbar and Fastank, we also work with many other Oil Pollution manufactures and can provide, fast erection, large storage

tanks, small capacity fast tanks, Abanaki Oil Belt Skimmers, oil dispersant spray systems and other types of Oil spill containment and recovery equipment.
