

Glow Power Rental - Generator Rental Dubai, Abu Dhabi & UAE | 30-1250 kVA, AC & Tower Light Rental

Al Sajaa Industrial - Emirates Industrial City
Dubai, Dubai
United Arab Emirates

Phone: +971505107539

Glow Power Rental is a generator rental company based in the UAE, founded in 2020. We supply diesel generators, air conditioner rental, light towers and power distribution to sites and events across Dubai, Abu Dhabi, Sharjah, Jebel Ali, Ajman and every Emirate. Generator Rental Dubai if you are looking for a rental generator in Dubai, we rent single diesel generator units from 30 kVA to 1250 kVA, delivered, installed and commissioned. Rent a generator for a day, a season or a full project. Sizing is matched to your actual load rather than rounded up, so you are not paying for capacity you never draw. That covers everything from a small set for a marquee to a paralleled bank running a festival site. Synchronized Power for High-Caliber Sites and Events Our single diesel generator units top out at 1250 kVA. Above that, we design and deliver synchronized power systems: multiple generators paralleled to run as one supply, sharing load between them and scaling well past what any single set can deliver. This is what high-caliber sites and events run on. A main stage, a full exhibition hall, a multi-zone festival site or a broadcast compound needs more power than one machine provides, and it needs that power to behave as one clean supply rather than a patchwork of separate sets. Synchronization also buys redundancy and backup: with units sharing the load, one set dropping does not take the site down with it. If your project is large enough that you are thinking in megawatts rather than kVA, this is the conversation to start. Diesel Generator UAE: 30 kVA to 1250 kVA Our diesel generator fleet runs from 30 kVA to 1250 kVA as single units, with higher capacity delivered through synchronized systems. Every power generator we own is maintained in-house and backed by our engineering team. AC Rental and Air Conditioner Rental Dubai Cooling is not an afterthought in the UAE, it is half the job. We offer AC rental across the Emirates. Portable / 4

conditioner rentalSpot coolingFull climate systems for tents, venues, site offices and eventsAir conditioner rental in Dubai works best when the cooling and the power come from the same supplier, because the AC load is usually the largest single thing your generator has to carry. We size both together.Light Tower RentalLight tower rentals for construction, events, overnight work and any site that keeps running after dark. Light tower generator units are available as standalone sets or integrated into a wider site power plan.Power Distribution, Cables and Distribution BoardsPower that stops at the generator terminals is not much use. Distribution is where temporary power most often comes undone, and we rent the whole chain rather than treating it as an afterthought bolted on at the end.Main and Secondary DistributionWe supply main distribution at the generator and secondary distribution out at the zones where the power is actually consumed. On a multi-zone site that structure is what lets each area be switched, isolated and fault-found on its own, so a problem in one corner does not take the whole site dark.Electric Distribution BoardsElectric DBs configured for the loads they feed, with the outlets your equipment actually terminates into. Boards are tested before they leave us, and our engineers set them up on site rather than leaving them at the gate.Power CablesPower cables sized to the run and the load, not to whatever is on the shelf. Cable that is undersized for the distance drops voltage before it reaches the equipment, and that shows up as mysterious faults at the far end of a site rather than as an obvious failure at the source. We work the cable runs out as part of sizing the job.Taking generators, cooling, lighting and distribution from one supplier means one delivery, one point of contact, and one team accountable at 2am on build night. It also means the distribution is designed around the generator instead of sourced separately and hoped to fit.Main Industries We ServeEvents and entertainment. Festivals, concerts, exhibitions, weddings, corporate activations and sporting events. Most of our client base sits here: event organisers, production companies and venue teams. Power, cooling, lighting and distribution arriving on one truck, to a build schedule that does not move.Construction. Site power from first mobilisation through to handover, tower lighting for night works, and distribution out to the areas of the site that are live at each stage.Film and TV

production. Power for shoots, unit bases and set, with distribution run to where the crew actually needs it and an engineer on call for the hours you are shooting. Hotels and hospitality. Backup and supplementary power, plus cooling for outdoor venues, functions and any space the building's own system was never sized to handle. Industrial and commercial. Standby cover, planned shutdowns, and temporary supply while permanent plant is maintained or replaced. Generator Rental Dubai, Abu Dhabi, Sharjah and Ajman We deliver across every Emirate from a single fleet, including Jebel Ali and the northern Emirates. Among generator rental companies in the UAE, that single-fleet coverage is what lets us move a unit between sites at short notice. An ISO Certified Generator Rental Company ISO 9001 for quality management ISO 14001 for environmental management ISO 45001 for occupational health and safety ICV registered, reflecting our In-Country Value contribution to the UAE economy Every project is backed by 24/7 support and an in-house engineering team. We provide live load monitoring, so you can see what your site is drawing instead of guessing at it. EcoEdge: Sustainable and Lower-Emission Power EcoEdge, launched in 2025, is our lower-emission range: biofuel-ready generators, solar power and hybrid systems, in line with the UAE Net Zero 2050 target. If your project has an emissions commitment attached to it, start here. PowerMatch: A Free Generator Sizing Calculator Most people who need to rent a generator know their equipment list, not their kVA. Guessing costs money in both directions. Undersize it and the set trips. Oversize it and you pay for capacity that never gets used. PowerMatch is our free generator sizing calculator, part of Power Desk by Glow Power Rental. It asks three questions: what you are running, how much of it runs at once, and your site conditions. In under a minute it recommends a specific unit from our fleet. No engineering background needed, and you do not need to speak to anyone first. Power Desk also runs free conversion tools for the maths that comes up on every job: kVA to kW, kW to amps, and amps to kW. Why Glow Power Rental Sized, not guessed. We match the set to your real load rather than rounding up, so you are not renting capacity you never draw. The whole chain from one fleet. Generators, cooling, tower lighting and distribution, delivered together and designed to work together. Scales past a single unit. Synchronized

systems take you well beyond 1250 kVA when the site needs it. ISO certified and ICV registered. Quality, environmental and safety management independently audited. Engineers, not a call centre. 24/7 support from the team that specified your job. Request a Quote Tell us your load, your site and your dates. Our power desk will work through the requirement with you and prepare a quote. Visit glowpowerrental.com.
