Delmon AAC Factory- the manufacturer of Autoclaved Aerated Concrete (AAC) Thermalite products in Dubai - the most preferred blocks in the Gulf - and the sister concern of Al Jazeera Factory, Abu Dhabi started production from its plant in Dubai since beginning of 2006. Delmon AAC Factory, as a sister concern of Al Jazeera Factory, who brought AAC products to UAE and who has to its credit thousands of projects in UAE ranging from small villas to high rise towers, maintains the same superior quality in all stages of production, engineering and marketing as their parent concern. Delmon is equipped with a production capacity that is considered to be the largest in UAE and is one of the largest in the whole GCC countries in mass production capacity. Delmon has in its plan to produce AAC reinforced panels- the first of its kind in UAE. AAC Thermalite is a natural building material that combines many superior properties like High Thermal Insulation with high compressive strength and stability, Superior Fire Resistance, Lightweight, Excellent sound Insulation and Absorption etc. It is manufactured as per the international standards like ASTM (USA), BS EN (British, Europe) and DIN (Germany). AAC was developed in Germany over 70 years ago where it quickly became accepted as a superior building product and has been widely used all over Europe, Asia, Australia and America. Delmon has an established engineering division to take care of production

and quality support to the clients, consultants and to the contractors up to the final execution of a project. The technical backup is extended through a highly qualified and well-experienced team of engineers, including studies on savings of structural and air-conditioning by using AAC Thermalite Blocks and project supervision.
