Rolls-Royce is a truly international business operating in 50 countries. It operates in four global markets - civil aerospace, defence aerospace, marine and energy. It is investing in technology and capability that can be exploited in each of these sectors to create a competitive range of products. The company now has a total of 54,000 gas turbines in service worldwide. Over more than a century, Rolls-Royce has built up a reputation for reliability, integrity and innovation to become the world's most recognised name in engineering. The company continues to invest in products, technology and services for the future. The Trent family of aero-engines has won a majority share of the new generation widebody airliner market worldwide, including a 42 per cent market share in the Middle East. The large installed base of engines generates demand for the provision of services. The company seeks to add value for its customers that will enhance the performance and reliability of its products while strategic acquisitions have greatly expanded Rolls-Royce capabilities in all four of its sectors of operation.

Civil Aerospace

Rolls-Royce success in aerospace is based on the company's wide product portfolio and the strength of its gas turbine technology.

Defence Aerospace

sectors.

Marine

Our installed base in the region continues to grow and we are enhancing the competence and capability to provide service and maintenance to our customers.

Energy

Rolls-Royce energy activities include gas turbine based generating sets serving the power generation market.

To address the fast growing Nuclear global market, Rolls-Royce has established a new business unit with the capability to offer a broad range of civil nuclear expertise
